ABSTRACT

Positive impact of learningthafidz is to develop students' ability to memorize and improve students' memorization abilities and can make students more familiar with the teachings of the Islamic religion by memorizing the Qur'an will increase faith, avoid fear, sadness and anxiety, the ability to build better social relationships and gain trust from other people and also know much more about the meaning and significance of each verse he reads. The aim of this research is to determine the positive impact of memorizing Al Quran to improve students' cognitive intelligence at Kinawai Balimbiang Elementary School. To know. Methods used in memorizing the Al-Quran at Kinawai Balimbiang Elementary School. To find out the positive and negative impacts of memorizing the Al-Qur'an at the Kinawai Balimbiang Elementary School. In this research it is known that the programthafidz This is done once a week on Fridays and is carried out at different times for male and female students. Female students carry out the program.thafidz from 10:30-11:30 and for male students men 13:30-14:30. The method used in this research is a qualitative descriptive method by means of interviews and observations.

INTRODUCTION

Increasingly sophisticated science has influenced every activity carried out by people from all walks of life and use all technology so that all humans are influenced by technology because what we see now is that all humans are dependent on technology. With the abundance of technology in the current era, all people are neglectful of everything, such as carrying out their obligations, namely prayer, reciting

the Koran (Xin dkk., 2019). There are a lot of things that are detrimental but there are still a lot of things that are beneficial depending on how humans use technology, which we both know that technology makes work a lot easier but it also neglects people a lot with everything in technology, there are games, which is one example. which makes humans forget all the things games consist of game online and non-online games, both of which really make people careless about their time and work

Well, we need to know that all students have very different abilities, but they all still have cognitive intelligence, so we have to be able to help their intelligence. This can be used as well as possible by being guided by religious knowledge (Stroup & Gray, 2018). Inside here There is also an application based on the Al-Qur'an which also really helps make it easier for us to read and memorize the Al-Quran. Moreover, in the current era, memorizing and reading the Al-Quran is very rarely done by humans because of the many worldly negligence. In fact, memorizing the holy verses of Allah SWT is very difficult. It's difficult if you do it seriously because you want to get the blessing of Allah SWT (Alhuwail dkk., 2020). Memorizing the Al-Qur'an can be tried or carried out from a young or old age. There are many benefits from memorizing the Al-Qur'an by just reading it. We will already get rewards, especially if we memorize it properly, life will be well balanced because of the Al-Qur'an. 'an is a guide to life for every Muslim (Oliemat dkk., 2018). The Al-Qur'an is also able to provide calm and tranquility for every person who reads it (Berenbaum dkk., 2019). Every thing that a child is able to master, we must appreciate it first so that the child feels appreciated and this greatly influences a child's mental and personality, which we all know, every child has their own strengths and weaknesses (Jin dkk., 2021). We as teachers and parents have a very important role in the development of a child who is good in science and good in religion (Masten, 2018).

In this way, we must both realize the importance of memorizing the Al-Qur'an, which must be our common concern as teachers, parents and the community must together guide all groups to memorize the Al-Quran, which we see today's children, even people Even as adults, there are still many who are not fluent in reading the Al-Qur'an, so education is the only way because we both know that by reading the Al-Qur'an and memorizing it, we can increase our intelligence. for elementary school students and for middle and high school students, it can really help the level of politeness and behavior of students and for those aged out of education they can use the Al-Qur'an as a guide to their lives and teach each other the correct pronunciation in reading the Al-Qur'an. 'an which can be applied to a child. One of the ways that can be done to make children like memorizing the Qur'an is by memorizing with tips. We have to follow the learning method that a child likes so that the child also feels happy and not too burdened. then we must first pay attention to each student's desires and abilities (Kolb, 2023).

Memorizing the Al-Quran can be done from the start of school. School education can make it easier for every human being to memorize the Al-Qur'an because of its very important role. significant in life (Zhang dkk., 2018). Education is not only a matter of

knowledge but also demands in everyday life and in guiding students in everyday life it can be done by parents and the surrounding environment because the child's environment is more at home than outside, so the family has an important role. in a child's development, because the family is a child's closest place, a family that is good at educating will definitely produce good and intelligent children (Lauro dkk., 2020). Parents are the first school for every child. Every behavior and attitude of a child really depends on the way the parents educate it. This does not mean that the environment has no influence on a child's life. A good environment also greatly influences the character of each child because as can be seen, social interactions are also very influential. regarding student behavior, therefore we all have to guide all children to behave well and obey religion (Reza dkk., 2020). In order to be able to make our nation and family proud, we must guide each child in various ways so that we can change generation after generation to be much better than before (Pamuji & Limei, 2023).

Apart from having a big impact on abilitycognitiveMany students of the Koran also provide various thingsmotivationeach of its meanings is very beautiful and very meaningful, so that way we can also raise students' enthusiasm in memorizing the Al-Qur'an using various methods. To increase students' desire to memorize the Al-Qur'an, we can also tell about every content contained in it so that by telling stories and telling stories makes students understand how important a lesson in the Koran is (Abdullah dkk., 2018). Every child can develop their thinking abilities. Every student also has different ways of understanding various things in each science presented to bring closer and explain how important it is to memorize the Qur'an for their cognitive abilities. We as teachers must be able to emphasize each goal of the science taught. We convey what we know about religious knowledge and will be used in everyday life. Starting from a young age until old age, because religious knowledge is a very important knowledge for every human being to master, we must understand it first before passing it on to students so that various deviations from religious knowledge do not occur (Li dkk., 2019).

Education has a function not only to know about Islam but also to strengthen the teachings and use them in every situation where religious teachings are not only about knowledge but also about rational thinking and must emotionally involve a child in every education, of course it has a role to understand, practice and use. in living life so that everyone lives their life not only pursuing the worldly world but also the afterlife, so we must explain to students that life in this world is only temporary while in the afterlife it is eternal and eternal (Sabic-El-Rayess, 2020). Therefore, students will really understand now and later by memorizing the Qur'an, it has also become a provision for themselves and their parents, which apart from making a student understand its meaning, also touches the students' emotions more often memorizing and reading the Qur'an. it is very helpful for calming the heart and mind (Dollahite dkk., 2018). It is very easy for a child to direct a child who memorizes the Al-Qur'an compared to a child who rarely or never reads the Al-Qur'an. There are many positive impacts of

memorizing the Al-Qur'an, not only to improve ability.cognitivestudents but also shapes their character in living their lives and also makes them close to Allah SWT.

A child's character determines his future life, therefore, as a parent, you must provide an understanding of what is good and what is bad for your child. A child's actions and attitudes are the influence of each environment. Every child will not be able to differentiate between good and bad without the existence of knowledge and guidance from the surrounding environment, so education is a very important thing for every child's development, which is very helpful in later life, various things in education, various ways of education are still very important, no matter what subject it is (Fiqih dkk., 2023). All lessons are related to religion, attitudes, manners and character of each student. With the presence of knowledge, the nation's children are formed who are intelligent and make their parents, religion and nation proud. In the current era, any deviation from a child's attitude must be given great attention because with deviations, all criminal things happen, so let's monitor every child's behavior and provide understanding to children so that they become good children in being intelligent in thinking (Hammond dkk., 2020).

To make children intelligent, of course food is also one of the triggers for their development, which is when children's thinking and memory are very strong, especially when it comes to memorizing verses from the Koran, because at this age it is very easy for children to grasp all the things they memorize by prioritizing the role of parents and teachers for children's development by preparing nutritious food is already a step to guide children so that they can easily absorb lessons because nutrition is also an important factor so that children are able to follow their every development and what we need to know is which parents, younger siblings, older siblings is the very first environment for a child, good family relations are certainly a trigger for a child's development, where the family is the first pillar in forming a child's character, demands a sense of love and affection and gives parents and family a very important role in behavior patterns. Every child's behavior in memorizing the Al-Qur'an in a harmonious family is a good trigger for children to memorize because it is where they feel comfortable and safe so that it makes children enthusiastic about carrying out all their education (Storage dkk., 2020).

Memorizing the Al-Qur'an greatly affects a person's mental state because the human body can be affected by its sound as well as its brain with good vibrations, so a person who memorizes the Al-Qur'an then by memorizing the sound that a person who memorizes the Al-Quran sings The 'an will enter the ear and then be conveyed to the brain, so that the human brain will digest everything that is recited, that's why when someone memorizes the Qur'an, it will really train their cognitive abilities in thinking and in making various decisions in everyday life. Every time you memorize the Qur'an, there are thousands of good things for the memorizer, of which these good things are very influential for all human abilities and development. Every person who memorizes the Qur'an, of course it is also one of the guidelines for people to judging someone, there are no bad words for someone who memorizes the Qur'an, where the public's view

of a person who memorizes the Qur'an is always good, there are lots of positive things from the surrounding environment about a person who memorizes the Qur'an, not to mention the *reski* who are always flow for someone who memorizes the Qur'an, not to mention the multiple rewards for someone who memorizes the Qur'an (Calcagno, 2018).

Learning by reading verses that will be memorized repeatedly with correct reading and good guidance from the teacher will make it easier for students to understand and memorize the holy verses of the Qur'an because being read over and over will certainly make it easier for students to remember the reading of the holy verses Al Quran. Especially with the ability of elementary school children to be very high so that it is a very effective way to help children in memorizing the Qur'an not only missed by the teacher's memorization, of course also must pay attention to every *makhraj tajwid* that is read by students, visual and kinesthetic learning patterns are also applied, there is convergence because of each of these patterns. It is hoped that the process of memorizing the Al-Qur'an will use movement signals to make it concrete *tajwid*. What students must pay attention to when reading the Qur'an is that this is in accordance with student development, where at elementary school age children's development rates preoperational cognitively where at this stage students begin to show clearer thinking processes. The process of memorizing the Qur'an is not only aimed at memorizing the Qur'an, it becomes initial information for students and later students have the ability to relate every fact they encounter later (Scribner, 2019).

Such a process certainly requires careful learning planning. Planning can be interpreted as the process of preparing various decisions that will be implemented in the future to achieve specified goals. The planning function includes the activity of determining what you want to achieve. In general, planning includes the activity of determining what you want to achieve. Broadly speaking, teaching planning includes the activity of formulating what goals are achieved by a teaching activity, what methods will be used to assess the achievement of these goals or what materials will be delivered, how to deliver them and the media tools needed. Learning planning as a teacher's guide to teaching for educators as well as a learning guide for students. The plan is also shared with the student's guardians with the aim that the student's guardians or parents can describe in detail the learning material at school (Janssen dkk., 2019). Parents can assist in preparing their children's learning at school and repeating it at home. Learning planning is a teaching guide for all groups, both teachers and parents, because it is from there that learning is clearly illustrated and the process that must be carried out by teachers and parents (Dong dkk., 2020).

It is hoped that the benefit of this program is that parents can find out what special activities are provided to develop several aspects of development in students. Parents can provide various input on models or methods that will make it easier for children to memorize the Koran. initial knowledge for students about how learning works to foster their interest in learning at school. Parents can see directly the impact of every lesson given every day to students. Parents are also helped to become educators at home so that this target is achieved by each party involved in It is hoped that this program can

carry out its role well by the parties involved in this program so that this program runs well and is well controlled in accordance with the desired targets so that all groups also work together in improving elementary school students' memorization of the Qur'an. The learning process that takes place in all daily student activities through the help of parents as those responsible for education with the aim of building good personalities in the academic field and good in the religious field and running tastefully (Ruiz dkk., 2020).

RESEARCH METHODOLOGY

This research uses a qualitative descriptive method whose target is elementary school students. Data collection takes the form of interviews, observations and documentation. This data is collected by recording using a tool.electronic handphoned and can be analyzed and followed up by interview techniques carried out with teachers and homeroom teachers where the object studied is the positive impact of memorizing the Al-Quran on students' cognitive intelligence (Castleberry & Nolen, 2018). Researchers can compare the results of interviews with observations to test or see the truth of the information obtained after all the data has been collected (Sándorová dkk., 2020). This research was carried out in elementary schools with the aim of finding out the impact of memorizing the Koran on intelligencecognitivestudents in this research to find the positive impact of memorizing the Al-Qur'an

Relevant parties were invited for interviews and asked for their opinions and various matters regarding the positive impact of memorizing the Qur'an on intelligencecognitivestudents who research with methods (field reseach) is observing directly to obtain information that is really needed in taking this research report and it is really hoped that all the data collected can help in taking the results of the research report (Hu dkk., 2019).

By using this method, researchers want to describe the conditions that will be observed in the field so that they are more specific, transparent and in-depth, so that the data produced makes it very easy for researchers to take the results of their research reports, where the research results are true as they are without any engineering so that researchers get accurate and correct results with So the research certainly got maximum results so that the researcher did not hesitate in conveying the results of his research report about the positive impact of memorizing Al

Qur'an on intelligencecognitivechildren for whom this research will be very useful in the future as a benchmark in using memorized verses of the holy Qur'an to improve their abilitiescognitivestudents who in research using qualitative descriptive methods make it easier for us to find the truth of every data we get so that all data is very accurate.real and there is no doubt that the method used really influences the research results (Mathis dkk., 2019).

RESULT AND DISCUSSION

The activity of memorizing the Al-Qur'an is a goal of a school to shape its students to have souls full of faith and piety, with the activity of memorizing the Al-Qur'an it is able to help students' morals and behavior to be more focused in their education (Jones, 2019). There are various preparations that are made, including first looking at the students' talents and interests, attention from parents is also very much needed, and cannot be separated from the teacher's ability to educate children, so here we can conclude that the role of parents and teachers is very much needed in every student's interests and talents. The results of interviews conducted by researchers with students showed that memorizing the Al-Qur'an had a very positive impact on development.cognitivestudents because it can help students' thinking abilities in living their daily lives (Javaid dkk., 2021). And makes students more focused on increasing their faith and devotion to Allah SWT. So here it can be seen that memorizing the Al-Qur'an has a very rapid impact on the student environment because memorizing the Al-Qur'an is a form of commendable character which will make students liked by all groups, so it will really support the students' mental health in memorizing the Qur'an (Zu dkk., 2020).

This is also enough to prove that the Al-Qur'an is a guide to life for mankind, which we can see from the positive impact of memorizing the Al-Qur'an on development.cognitivestudents and can also increase the closeness between students and teachers and the closeness of students and their parents because we both know that in memorizing the Qur'an students really need guidance andsupport from many circles but the priority is guidance andsupport from parents where this support really makes it easier for students to memorize the Al-Qur'an from parents and teachers where teachers and parents can work together in carrying out the process of guiding students in memorizing the Al-Qur'an. There are several things that serve as references for introducing religious and moral concepts to children to create their attitudes and character as individuals with noble character and can also increase interest in learning and memorizing the Al-Quran and really hone positive potential for students. In conducting interviews, it can be seen that it is true that memorizing the Al-Qur'an really helps improve abilities or intelligencecognitivestudents who can be seen that students who memorize the Al-Qur'an are much calmer than students who have not memorized the Al-Qur'an at all (Kojola, 2019).

From the results of observations in the field, it can be seen that the method of memorizing the Al-Qur'an goes through several stages, namely by having a program to support success in memorizing the Al-Qur'an, including dividing the number of juz in the Al-Qur'an into the time determined by the teacher and later deposited to the teacher (Vapnik & Izmailov, 2021). Students who are able to memorize their memorization smoothly will also be given prizes by the school as an opportunity to increase students' enthusiasm in memorizing the Al-Qur'an. There are also several factors that support students' success in memorizing the Al-Qur'an, including strong motivation to memorize (Tran dkk., 2021). The teacher in memorizing the Qur'an must also have

closeness to the students so that the students can be easily managed and directed. The teacher must also guide the students like parents guide their children in memorizing the Qur'an. The environment is also an important factor because a conducive environment is very important. has a good impact on students' concentration in memorizing the Al-Qur'an (Fan dkk., 2018). Solving problems between students and students if there is a commotion must also be resolved in a loving way so that students do not feel blamed for each other, encouragement from parents is also a very good motivation for students, good communication is established between student teachers and parents it is also a very important reference in students memorizing the Koran (Yan dkk., 2020).

Initially at Kinawai PRIMARY SCHOOL there was no program for memorizing the Al-Qur'an but in the last 4 years it has been held because of the many competitions.tahfidzwhich was carried out between schools and the principal, Mr. Jarimis S.Pd. feel that this thafidz program should be held because it can improvehafiz andhafidzahwho come from the school and not only that, according to the principal, this program is very good compared to students just playing around during class breaks during the process of memorizing the Al-Qur'an.

The school really provides sufficient facilities to students and teachers are also enthusiastic about guiding students to memorize the Al-Qur'an where teachers hold a deposit process every Friday where students are required to deposit 10 memorized verses every week and it is stipulated that the deposit is made every Friday morning and students who have not yet got the 10 verses will be tutored again to memorize them for male students. After returning from Friday prayers, boys were asked to come back to school and the teacher helped the students to deposit their memorization by asking the students to memorize 1 verse and then deposit it until it became 10 verses and female students were asked not to go home first if they had not memorized 10 verses and later also will be guided by the teacher to memorize the Al-Qur'an (Hyndman, 2020).

Interviews conducted with teachers also showed that students at Kinawai PRIMARY SCHOOL participated very well in depositing their memorization, which can be seen from the number of memorizations obtained by students until they graduated from elementary school, which according to the teachers was the achievement achieved by Elementary school students are very good (Universitas Muhammadiyah Ponorogo, Indonesia & Januar Mahardhani, 2020), because school children's memory is quite good, it will have a very good impact if they are asked to memorize the Koran because their memory is very strong. As teachers, everyone only plays a role in guiding them well so that their students are correct. in memorizing and the teacher also explains to students how to read well and correctly so it is not just the memorization that is good but the reading is also good and correct in accordance withtajwidand the length and shortness of reading the Al-Qur'an (Hadi, 2020). The role of the teacher in guiding students can be said to be quite good because apart from guiding them to memorize, they also correct their reading in between memorizing. The teacher also explains the meaning of the verses they read so that they know the meaning of each verse they read. In which the teacher also gives the opinion that memorizing the holy verses of Al -The

Qur'an really has a positive impact on students' cognitive intelligence. Memorizing the Qur'an really sharpens intelligencecognitivestudents so that in understanding the subject matter students are greatly helped and made it easier (Dasem dkk., 2018).

The students' guardians or parents also explained that this program had a lot of positive influences on their children, where usually children never read the Koran, now they are reading and memorizing the Koran in their daily lives, there are many good changes in behavior that people can see. After the child has read and memorized the Al-Qur'an (Atnawi, 2019), the various positive impacts of the child's attitude, behavior and character have become a very positive impact on the child and parents also really hope that the child will be pious. so that they can become children who have sufficient religious knowledge and have commendable morals (Adi dkk., 2021). Parents at home also help guide children in reading and memorizing the Al-Qur'an, where parents ask children to go to the TPA to recite the Koran in the afternoon and in the evening parents check the child's memorization again so that parents also memorize the Al-Quran. 'an and reading the Al-Qur'an because it often guides children to memorize the Al-Qur'an at home so this program also increases parents' memorization of the Al-Qur'an. Every child has excellent potential because of good guidance from parents, where parents also motivate children to have a good desire to memorize the Al-Qur'an in implementing programs at school (Rofiatun Nisa' & Eli Fatmawati, 2020).

According to the school administration officer, since the existence of this program, all students have started to carry it out diligently because of the many prizes they have received and the lessons learned from this program, which he has seen a lot of positive impacts because many students have participated in competitions and won championships (Christian, 2018). and has brought the school's reputation to a very good level because there are many students who like to memorize the Al-Qur'an rather than playing during free hours, which also greatly reduces the occurrence of fights between students and students because of a game (Hermansyah dkk., 2023). Many students compete in memorizing the Al-Qur'an.

In fact, it could be said that everyone is enthusiastic about memorizing the Qur'an, which also really makes various parties feel the benefits of the program created by the school because it has had a lot of positive influences. It feels like various desires of the school, students, teachers and parents have been achieved because of the existence of this program. With this program, there are many generous people who help in completing the facilities for the smooth running of this program, starting from Al-Qur'an, mukenas, sarongs, peci, even clean water supplies, although there are also many who are enthusiastic so that students are more interested and enthusiastic in memorizing the Al-Quran. 'an (Utami dkk., 2023)

Many parties support this program so that it makes students interested in memorizing the Al-Qur'an, where every time they memorize it, they are always given prizes from the school and outside the school, which makes students' interest in memorizing the Al-Qur'an even more active and diligent. The large amount of support from the community outside of school makes children encouraged to participate in this

program in addition to helping their intelligencecognitivestudents (Al Maarif dkk., 2023). This program has made all groups have better relationships, both between school principals and teachers, between students and teachers, between teachers and parents, as well as between children and parents, as well as teachers and the community around the school and those far from the school area. This program can run well not far from good leaders and good cooperation that have existed during the course of this program. Parents and teachers also have an agreement to jointly protect each child so that all programs at school can run well and achieve school goals by forming children who are diligent, diligent, faithful and devoted to Allah SWT. This program is also accompanied by group prayer activities. so that it can make children understand that prayer is a pillar of the Islamic religion (Ranal dkk., 2023).

The results of interviews conducted by researchers with the principal, head of administration, guardians and parents produced results which explained that guidance, encouragement and support from the surrounding environment had a huge impact on the development of a child's memorization. Children need good motivation, correct guidance from all parties, therefore the Al-Quran memorization program

The Qur'an is already running well at Kinawai PRIMARY SCHOOL, which can be seen in the competitions participated in by students at Kinawai PRIMARY SCHOOL, where many of them have won championships in memorizing the Qur'an, which can be seen Many groups are starting to compete to help improve this program with various efforts and various ways to achieve the desire for students who participate not only in the academic field but also in the religious field, which has been implemented for the past 4 years (Ansel & Pawe, 2021). All students are very enthusiastic in taking part in various kinds of competitions in the religious field, one of which is the programtahfizor a program of memorizing the holy verses of the Qur'an without looking at the Qur'an and the reading is good and correct (Mustafiyanti dkk., 2023).

This can show that the role of all parties has gone well because it can be seen from the increasing ability of students in memorizing the Al-Qur'an and that all of them have carried out very good coaching in assisting students in memorizing the Al-Qur'an. It seems like teachers only need to pay attention to their students' rest times so that students don't feel bored with learning and memorizing the Al-Qur'an. Every group also has to pay attention and think about how to prevent students from getting bored and feeling burdened in memorizing the Al-Qur'an. Maybe the teacher can think about what methods will make students interested and not bored in memorizing the Al-Qur'an with the existence of sophisticated technology nowadays, teachers can certainly make students not feel bored when memorizing each time with pleasure and there will be no monotony in any learning lesson. It feels boring for anyone. Teachers can use audio murotal media for students and ask students to follow the reading they hear so that students will be more enthusiastic about memorizing the Qur'an and not feel bored because every time they memorize there are interesting methods and tools. students' attention (Auliani dkk., 2023).

Any agreement made to increase student interest must of course also be approved by parents to ensure that there are no disputes between parents and teachers. Of course, agreement is also the most important factor in the running of each program. Each child has different abilities in capturing memorization, of course, so the teacher has considered how to overcome any problems that occur, although this cannot be separated from the role of parents, the school environment and society, there are also several factors that must be considered so that system education is running well, namely teachers must be able to master and know the right way to guide students from each class to memorize the Al-Qur'an (Wanti dkk., 2023). In teaching, teachers must first approach the students' parents so that they can convey how to guide children in memorizing the Koran so that it is easier for children to memorize the Koran. Motivation and every support and direction are needed in every education. Not only that, teachers also have the responsibility to understand the characteristics and provide full support so that teachers can adapt to students' abilities (Siddiqi dkk., 2021).

Family is the main goal for a child to receive nurturing and strengthening both physically and spiritually. As parents, of course you must be able to understand character and provide various support and motivation to students because family is one of the factors that will make children more observant and smarter in capturing all knowledge. knowledge, both in the academic and non-academic fields, the family must fully support everything the child does so that they feel supported in every action and the closeness of the child and parents is something that has a big influence on the ability to perceive and behave as well as communicate and interact. with the outside world. Even though it is possible for children to make their own decisions, it still requires good guidance and direction from the family. The role of the family is the main thing in education because it is the family who knows more about the child's attitudes, behavior, development and interactions with the world around him, for which family support is very important. It has such an influence on a child's psychological development that of course no parent wants their child to be unsuccessful in the future (Liam dkk., 2023).

Environmental factors greatly influence the development of a child's character so that children will be quickly influenced and spend their time playing with their peers so that this also has a big influence on children's memorization. Parents and educators work together to discuss student programs and activities. This collaboration has a positive influence on the development of students. will feel cared for by parents so that it will make children enthusiastic about following lessons at school. Educators also feel very happy if there are difficulties in dealing with students. Parents spontaneously step in to educate students with the involvement of parents. Of course, this really helps teachers in carrying out learning activities efficiently. Having direct involvement from parents will of course really make this Al-Qur'an memorization program activity run well and properly so that everything you want to achieve from a learning poem can be related well so that it doesn't take long enough to achieve the vision. and the aim of parents and teachers is to make children memorize the Al-Qur'an and make the Al-

Qur'an a way to improve each child's thinking ability and memorization ability (Saskia dkk., 2023).

The aim of education is to develop human intelligence, especially in elementary school children, to direct and obtain the truth in addition to helping students acquire facts and mental skills. Islamic education refers to the aim of providing encouragement for increasing intelligence. Islamic education is not only focused on memorizing but is a comprehensive process because education aims to train intellectual abilities, emotionality and spirituality. The aim of Islamic education is related to the aim of creating humans as caliphs on earth and servants of Allah SWT. Apart from that, education is also to change accordingly

what is desired, which is attempted by educators in the educational process to achieve individual behavior so that it has high values and has moral character which is very influential in optimizing capabilities spiritual and this thought is carried out so that people can carry out and function as caliphs optimally with true meaning so that education will have a very good influence on human development in the current era (Anggraeni, 2019).

Islamic education has laid the foundations of the Koran regarding the objectives of Islamic education. The content of the material must be delivered using interesting methods, in order to achieve the expected goals in Islamic education. The use of educational models can be seen from the fact shown that Islamic education material and curriculum are taught in a special and interesting way and can be seen from the fact shown that Islamic education material and curriculum are taught in a special way for children. Inaccuracy in applying this method will hamper the goals of education in Islam. The key to character building for elementary school children in the educational process contained in the Al-Qur'an explains that children are born with good characteristics.

They believe that good characteristics will influence the practical implications for the learning model that should be applied in teaching and learning so that good characteristics remain until later they are more mature in facing various things that happen for a better life as a whole. All of them recognize that religious education is It has a very good influence on humanity from small, young, old and adult ages.

CONCLUSION

There is a very significant influence on the positive impact of memorizing the Qur'an on the cognitive intelligence of elementary school children or elementary school students because it can help them in connecting, assessing and considering various problems, events or occurrences that they have experienced in their current or future lives. Later, this will become a positive reference for memorizing the Qur'an in the development of cognitive intelligence for students at primary or elementary school level. There must be assistance from parents and teachers which is carried out effectively and periodically, because it instills the concept of memorizing the Qur'an. It must start from the basic education level because it greatly influences the development

of religion and religious concepts, which explains that memorizing the Koran is one example of teaching religious knowledge to elementary school students. Memorizing the Koran from students can only be seen after going through a long process. as explained by the daily memorization store for teachers and parents by holding joint murotals and programsthafizin schools where it will be mandatory for students to memorize the Koran. In terms of cognitive development, memorizing the Al-Qur'an has a very positive impact on students.

ACKNOWLEDGEMENT

The researcher would like to thank Mr. Jarimis, S.Pd. Principal of Kinawai Balimbiang Elementary School, Mr. Yonrizal S.Pd. as the head of administration at the Kinawai Balimbiang Elementary School, Mr/Ms Teacher at the Kinawai Balimbiang Elementary School, and to Ms Nela Yusnanti S.Pd. as a teacher and guardian of one of the students who has given permission and convenience for research. Hopefully this research can be useful for Kinawai Balimbiang Elementary School and all parties who can access the results of this research.
